*Hospital Sírio-Libanês, São Paulo, Brazil
Specialist of the Brazilian Society of Dermatology and a Member of the Brazilian Society of Dermatological Surgery
Member of the American Academy of Dermatology (AAD)
Member of the American Society for Laser Medicine and Surgery (ASLMS)*

"The treatment of cellulite has posed a significant challenge to the field of dermatology for over a decade. Many patients being treated for medical issues in my practice are now inquiring about cellulite treatment and body reshaping, and thanks to Alma's new UniForm technology, I can now recommend its effective, non-invasive treatment.

The UniForm combines high-energy RF technology with customized mechanical lymphatic drainage to offer deep heating and lymphatic circulation in a non-invasive treatment.

Having treated patients for over a year with the UniForm, I can attest that patients see an impressive circumferential reduction and visible improvement in the appearance of cellulite in the treated areas – all in just five to ten, easy treatments, any time of the year even during Brazilian summer time, for any skin color".

Michael Scheflan, MD

Board Certified by the American Board of Plastic Surgery and American Board of Surgery

Dr. Scheflan is a leading plastic surgeon with extensive experience in using the UniForm module for the treatment of cellulite. He treats patients who have undergone surgery as well as those interested in reducing the appearance of cellulite.

In the past year Dr. Scheflan has applied the treatment to numerous patients and has found it to produce extremely successful results and yield high patient satisfaction.

"My patients were delighted to learn that our practice now offers a non-invasive treatment for cellulite and body shaping that produces real, measurable results -- and involves no side effects or down time. We've seen excellent results in patients interested in flattening their stomach, and slimming hips and thighs." Dr. Scheflan has used the AccentXL system for Perioperative liposuction patients as well with favorable results. Post operative swelling and minor irregularities improved at a faster rate and patient comfort has been enhanced.
