

INNOVATING BEAUTY

LISTEN TO THE EXPERTS

ACCENT[®]XL

The **Accent[®]XL** from Alma Lasers is a unique multi-application, upgradeable, Radio Frequency (RF) based platform for the non-invasive treatment of wrinkles, rhytids, and reduction in the appearance of cellulite. Here's what a few of your distinguished colleagues had to say about their experiences with the Accent^{XL} system.

“The Accent^{XL} is the most effective RF system on the market today. With the advantage of deeper penetration offered by the UniPolar module, both volume and skin laxity are effectively treated with one system.”

Karen S. Harkaway, MD

Board Certified Dermatologist, Debra, NJ

“The Accent^{XL} provides our patients with an alternative to surgical procedures such as liposuction or a facelift. We can treat deep and superficial tissue to achieve improvement in cellulite, body contouring and skin laxity, while maintaining patient comfort without anesthesia.”

Stuart Melnick, MD

Medical Director, Laser and Cosmetic Center, San Jose, CA

“Accent^{XL} treatments can be performed rapidly with no downtime and can be applied concurrently with other non-ablative modalities, such as injectables, to achieve better results in the ‘non-surgical facelift.’ Immediate skin tightening is evident and the results are often considered striking.”

Macrene Alexiades-Armenakas, MD, PhD

Board Certified Dermatologist, New York, NY

“We found that both the BiPolar and UniPolar modules of the Accent^{XL} system increased skin tightening of the neck, and the periorbital and perioral regions of the face. Unlike similar technology, the Accent^{XL} is effective treating almost all of my patients.”

Michael H. Gold, MD, FAAD

*Board Certified Dermatologist, Nashville, TN
(Research conducted at the Tennessee Clinical Research Center)*
